Ideation Phase

Brainstorm & Idea Prioritization

Date	29 September 2026
Team ID	SWTID-2026-6413
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process. For this project, the team generates multiple possible solutions for reducing manual ticket classification and routing before selecting a practical concept.

The ideas are grouped into classification, routing, exception handling, and monitoring so the team can compare related solutions and select a concept suitable for Flow Designer.

Reference: Mural – Brainstorm and Idea Prioritization template.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement: Incoming IT tickets require manual classification and routing, creating repetitive work for support agents, possible inconsistency in categorization, and delays in assignment to the appropriate support team.

Participants / Users	Discussion Focus
IT Support Agents	Reduce repetitive manual classification and routing work.
IT Administrators	Improve consistency of categories and assignment groups.
Employees / Ticket Raisers	Help tickets reach the appropriate team faster.

Step-2: Brainstorm, Idea Listing and Grouping

Generate multiple ideas before selecting the final concept.

Idea	Concept	How it helps
1. Rule-based auto classification	Use predefined conditions in Flow Designer to classify tickets.	Automates common ticket types and reduces manual work.
2. Keyword-based classification	Use important words in the ticket description to identify the category.	Handles repeated patterns in ticket descriptions.
3. Auto assignment group routing	Set the assignment group automatically after classification.	Reduces routing delay and manual selection.
4. Priority-based routing	Use ticket priority/impact information to support routing decisions.	Helps urgent tickets receive appropriate attention.
5. Service/type-based classification	Use ticket service or type fields to determine category and team.	Uses structured information for consistent routing.
6. Manual review fallback	Send unmatched or unclear tickets to a support agent.	Prevents automation from forcing an incorrect classification.
7. Classification audit/update	Record classification results and allow correction when needed.	Supports monitoring and improvement of rules.

Idea Grouping

Group	Ideas Included	Purpose
Classification	1, 2, 5	Determine the appropriate ticket category from available information.
Routing	3, 4	Send the classified ticket to the appropriate support team.
Exception Handling	6	Handle tickets that cannot be confidently matched.
Monitoring	7	Review results and improve classification rules.

Step-3: Idea Prioritization

Prioritize ideas using project-focused criteria: **Impact** on reducing manual work, **Feasibility** within Flow Designer, and **Consistency** of classification and routing.

Idea / Concept	Impact	Feasibility	Consistency	Decision
Rule-based auto classification	High	High	High	Core concept
Auto assignment group routing	High	High	High	Include
Manual review fallback	High	High	High	Include
Keyword-based classification	Medium	High	Medium	Supporting rule
Priority-based routing	Medium	High	Medium	Optional rule
Monitoring / audit	Medium	Medium	High	Future enhancement

Selected Concept

Flow Designer–based Auto Ticket Classification and Routing: When a new IT ticket is created, Flow Designer reads relevant ticket fields, applies predefined classification rules, assigns the appropriate category and assignment group, and sends unmatched tickets for manual review.

Concept flow: New Ticket → Trigger Flow → Read Ticket Details → Apply Classification Rules → Match Found? → Yes: Set Category & Assignment Group → No: Manual Review → Update & Assign → End

Expected benefit: Reduce repetitive manual classification, improve consistency in routine ticket routing, and reduce avoidable assignment delays while retaining human review for exceptions.
