PROJECT DESI GN PHASE- I I

Solution Requirements (Functional & Non-functional)

Date	29 September 2026
Team ID	SWTID-2026-6413
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Intuitive self-service ticket logging portal requiring no prior user training; automated classification reasoning visible on agent dashboards.
NFR-2	Security	Role-Based Access Control (RBAC) ensuring data compartmentalization; full payload encryption in transit (TLS 1 .3) and at rest (AES-256).
NFR-3	Reliability	Maintain ≥ 95% classification accuracy; automatic fallback to general triage queue without data loss if flow execution fails.
NFR-4	Performance	Flow execution, ticket categorization, and routing must execute within ≤ 3 seconds of ticket ingestion under normal load conditions.
NFR-5	Availability	High-availability architecture providing 99.9% system operational uptime (24/7/365) to support uninterrupted global ticket capture.
NFR-6	Scalability	Capacity to horizontally handle a 300% volume surge in ticket submission during critical service incidents without latency degradation.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration & Access	• Registration & SSO login via Corporate Directory / OAuth. • Role-based access management (End User, Service Agent, Admin). • Profile synchronization and departmental identity assignment.
FR-2	Ticket Ingestion & Parsing	• Multi-channel ticket capture from Web Portal and Inbound Email. • Automated text extraction of Subject, Body, Caller ID, and Priority. • Attachment integrity validation and initial deduplication check.
FR-3	Automated Classification Engine (Flow Designer)	• Trigger Flow Designer instance on incident record generation. • Keyword pattern matching and ML categorization logic execution. • Prediction confidence scoring and fallback routing to manual triage queue.
FR-4	Intelligent Routing & Assignment	• Automated assignment to support teams based on classified domain. • Load-balanced round-robin technician assignment. • Dynamic audit logging of automated assignment actions.
FR-5	Notification & SLA Tracking	• Real-time automated notification dispatch to assigned technicians. • Requester confirmation with ticket tracking reference. • Automated escalation trigger when response time breaches defined SLA.

Functional Requirements

Following are the functional requirements of the proposed solution.

Non-functional Requirements

Following are the non-functional requirements of the proposed solution.
