Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Project Design Phase

Problem - Solution Fit Template

Problem - Solution Fit Template:
The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- ☑ Solve complex problems in a way that fits the state of your customers.
- ☑ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☑ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☑ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☑ Understand the existing situation in order to improve it for your target group.

Template:

1. CUSTOMER SEGMENT(S) CS

IT Support Desk Agents, L1/L2 Support Engineers, IT Service Managers, and general Enterprise Employees (End Users) experiencing technical issues.

6. CUSTOMER CONSTRAINTS CC

Limited IT Helpdesk staffing budgets. Lack of in-house data science expertise to build custom ML models from scratch. Strict enterprise data privacy (PII) restrictions preventing the use of external open-AI tools.

5. AVAILABLE SOLUTIONS AS

Manual triage by dedicated L1 dispatchers (expensive & slow). Basic keyword-based assignment rules (rigid & prone to misrouting). Expensive 3rd-party ITSM AI plugins.

2. JOBS-TO-BE-DONE / PROBLEMS JBD

Accurately categorize incoming incidents based on ambiguous text descriptions. Route tickets directly to the correct resolver group. Reduce Mean Time to Resolution (MTTR).

9. PROBLEM ROOT CAUSE RC

End users describe technical problems using free-text, natural language that lacks standard terminology. Static rules fail to capture intent, requiring human intervention.

7. BEHAVIOUR BE

Agents spend hours reading descriptions just to re-assign tickets. End users repeatedly chase IT for updates because their ticket bounced between wrong departments.

3. TRIGGERS

TR

A user submits a vague incident ticket. High volumes of tickets during a major system outage cause severe backlog.

4. EMOTIONS BEFORE/AFTER

EM

Before: Frustrated, delayed, overwhelmed (agents).
After: Relieved, efficient, productive, supported.

10. YOUR SOLUTION

SL

An automated pipeline using ServiceNow Flow Designer integrated with Predictive Intelligence. It automatically reads natural language, predicts the category and priority, and routes the ticket instantly without a human dispatcher.

8. CHANNELS OF BEHAVIOUR

CH

Online: ServiceNow Service Portal, Email-to-Ticket, Microsoft Teams/Slack virtual agent integrations.
Offline: Phone calls to the IT helpdesk (which can be transcribed and routed).
