Date	03 October 2026
Team ID	SWTID-2026-6413
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Project Design Phase

Proposed Solution Template

Proposed Solution Template:
Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	**Problem Statement** (Problem to be solved)	Manual triage and routing of IT support tickets is time-consuming, prone to human error, and significantly delays resolution times for critical technical issues.
2.	**Idea / Solution description**	An automated system utilizing ServiceNow Flow Designer and Predictive Intelligence (Machine Learning) to analyze incoming ticket descriptions, accurately predict their category and priority, and dynamically route them to the appropriate assignment group without human intervention.
3.	**Novelty/ Uniqueness**	It combines no-code/low-code workflow orchestration directly with Natural Language Processing (NLP) in a seamless pipeline, replacing traditional, static routing rules with intelligent, context-aware ticket assignment.
4.	**Social Impact / Customer Satisfaction**	Drastically reduces Mean Time to Resolution (MTTR), freeing up IT staff for complex problem-solving and ensuring end-users experience minimal downtime and faster support.
5.	**Business Model** (Revenue Model)	Enterprise cost-optimization model. Value is generated through significant cost savings in IT service desk operations (reduced OpEx) and potential B2B consulting/implementation fees for deploying this automated solution to other organizations.
6.	**Scalability of the Solution**	Highly scalable as it leverages cloud-native ITSM platform infrastructure. The embedded ML model continuously
